

✅ Use Cases in Wellness Hub:

- 🎵 **Music & Raga Pillar:** Fetch Bhajan or sound healing playlists.
 - 🧘 **Body Pillar:** Fetch yoga tutorials or breathwork sessions.
 - 🙏 **Spirituality Pillar:** Fetch Gita discourses, mantras, or devotional content.
-

🔑 What You Need:

1. **Google Developer Console Project**
 2. Enable **YouTube Data API v3**
 3. Create an **API key**
 4. Use a Flutter HTTP client (like http package) to make requests.
-

🔍 Sample API Request (Video Search by Keyword):

GET [https://www.googleapis.com/youtube/v3/search?part=snippet](https://www.googleapis.com/youtube/v3/search?part=snippet&q=morning+yoga+routine&type=video&maxResults=5&key=YOUR_API_KEY)
&q=morning+yoga+routine
&type=video
&maxResults=5
&key=YOUR_API_KEY

Flutter Example (http package):

```
import 'package:http/http.dart' as http;

import 'dart:convert';

Future<List<String>> fetchYogaVideos() async {

  const apiKey = 'YOUR_API_KEY';

  const query = 'morning yoga routine';

  final url = Uri.parse(
```

```
'https://www.googleapis.com/youtube/v3/search?part=snippet&q=$query&type=video&maxResults=5&key=$apiKey'
```

```
);
```

```
final response = await http.get(url);
```

```
final data = json.decode(response.body);
```

```
final videos = data['items'] as List;
```

```
return videos.map((video) =>
```

```
  'https://www.youtube.com/watch?v=${video['id']['videoId']}').toList();
```

```
}
```

Display in App:

You can use:

- `url_launcher` to open YouTube videos
- `youtube_player_flutter` to embed them directly

1. Do I Need to Pay for YouTube API Usage?

No, for most use cases like fetching yoga or bhajan video metadata (search, details, etc.), the **YouTube Data API v3** is free within limits.

Free Quota:

- **10,000 units/day** (standard free quota)
- A typical **search request = 100 units**
- Fetching video details = 1 unit/request

Example usage:

- You can make **100 video searches/day** ($10,000 \div 100$)
- Or fetch details for up to **10,000 videos/day**

If needed, you can **request a quota increase** via the Google Cloud Console.

2.

Are There Copyright Issues?

Yes, but only if you display or store content outside YouTube's ecosystem improperly.

Safe Use (Allowed):

- Embedding YouTube videos using:
 - youtube_player_flutter or
 - iframe or
 - url_launcher (link out to YouTube)
- Displaying thumbnails, titles, and metadata **as returned by the API**
- Respecting branding and **YouTube's Terms of Service**

Risky Use (Not Allowed):

- **Downloading or caching videos or audio**
- **Stripping audio for playback** without using YouTube
- **Rehosting content** (e.g., saving on your server and playing it)

Best Practice: Use YouTube's embed player or link to their domain. This keeps you in compliance.

Conclusion:

- **Use the API for free** within quota.
- **Always embed or link to content**, do not download or redistribute.
- Use **official players or wrappers** to stay compliant.
